FUNCTION: INTERACTS WITH DNAK, TO DISASSEMBLE A PROTEIN COMPLEX AT THE PHAGE LAMBDA ORIGIN OF REPLICATION. STIMULATES, JOINTLY WITH GREE, THE ATPASE ACTIVITY OF DNAK (BY SIMILARITY).

SIMILARITY: TO OTHER PROKARYOTIC DNAJ, AND TO EUKARYOTIC DNAJ-LIKE PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           IIVDLEVTLEEVYAGNFVEVVRNKPVARQAPGKRKCN------CRQEMRTTQLGPG

RESULT 2 \$71199 dnaJ protein homolog atj3 - Arabidopsis thaliana

```
LDJ2 protein - leek

C; Species: Allium porrum (leek)

C; Species: 06-Jan-1995 *sequence_revision 06-Jan-1995 *te

C; Caccession: S42031

R; Bessoule, J.J; Testet, E; Cassagne, C.

submitted to the EMBL Data Library, February 1994

A; Reference number: S42031

A; Recession: S42031

A; Accession: S42031

A; Accession: S42031

A; Status: preliminary

A; Molecule type: mRNA

A; Residues: 1-418 <BES>

A; Residues: 1-418 <BES>

dnaJ protein homolog YDJ1 - yeast (Saccharomyces cerevisiae)
N;Alternate names: dnaJ protein homolog MAS5; protein N2418; protein YNL064.
C;Species: Saccharomyces cerevisiae
C;Date: 07-May-1993 #sequence_revision 07-May-1993 #text_change 20-Aug-1999
C;Accession: S26703; A39659; S58714; S62992; S17250

                                                                                                                                                                                                                                     Example 1; Fig 2A-B; 26pp; English.

This polypeptide sequence is encoded by the maize DnaJ-related gene (see T84330). DnaJ-related proteins assist in chaperone-mediated protein folding and provide cell viability at high temperatures. They are also involved in DNA replication, translation and peptide translocation across intracellular membranes. Due to this wide range of functions, DnaJ has a wide range of effectiveness and the gene's promoter sequence, ZmDJ1 (see T84329), is effective in a wide range of tissues. The claimed ZmDJ1 promoter can be used in claimed methods for control of antifungal or insecticidal genes in transgenic plants.

Maize ZMDJI promoter - and corresponding recombinant expression
PT systems and transgenic plants
PS Example 1; Fig 2; 16pp; English.

C The present invention describes the maize ZMDJI control sequence. Also
C EMDJI control sequence linked to a heterologous protein coding sequence;
C ZMDJI control sequence linked to a heterologous protein coding sequence;
C ZMDJI control sequence which retain transcription-initiating activity and/or
C contain the expression system; (3) DNA comprising fragments of the ZMDJI
C control sequence which retain transcription-initiating activity and/or
C the function of the leader sequence; and (4) a method to regulate the
C expression of a gene under control of the ZMDJI control sequence in
C comprising modifying the cell, parts, where the plant is a monocotyledon,
C control of the ZMDJI control sequence to contain the DNA of (3) or RNA
C of the same nucleotide sequence. Expression systems as described above
C in which the heterologous sequence in insecticidal or antifungal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              δÃ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
protein can be used to produce transgenic maize plants resistant to insects (e.g. European corn borer) or fungi (e.g. Ostrinia nubilalis). The control sequence comprises a constitutive promoter that directs transgene expression in various plant tissues, including 11-week-old leaf blades, leaf whorls, leaf collars, stalk rind, stalk pith, stalk nodes, roots and kernels. The present sequence represents the protein sequence 419 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       W83397

                                                                                                                                                                                                                                                     For the diagnosis, monitoring or treatment of cancers

PS Disclosure; Page 456-457; 787pp; English.

CC The invention relates to a method for diagnosing a disorder characterised

CC by expression of a human cancer associated antigen precursor coded for by

CC biological sample isolated from a subject with an agent that specifically

CC binds to the NAM, an expression product or a fragment of an expression

CC product complexed with an HLA molecule; and (b) determining the

CC interaction between the agent and the NAM or the expression product as a

CC determination of the disorder. The products and methods can be used in

CC the diagnosis, monitoring, research, or treatment of conditions

CC characterised by the expression of various cancer associated antigens.

CC The invention provides nucleic acid sequences and encoded polypeptides

CC which are cancer associated antigen precursors expressed in human breast

CC cancer, renal cancer, colon cancer, gastric cancer, prostate cancer and

PS Example 3; Page 93-94; 156pp; English.

CC This amino acid sequence corresponds to the N-terminal portion of the Streptococcus pneumoniae DnaJ protein. The protein shows a high degree CC of identity (72% and 51%) to the DnaJ proteins from Lactococcus lactis and E. coli respectively. The sequence encoding this truncated protein CC was isolated on the same nucleotide sequence that encodes the CC s. pneumoniae heat shock protein 72 (HSP72; W22357). The nucleotide fragment was isolated from a HindiII-partially digested genomic DNA CI intrary using a fragment of the chimaeric gene (T73392) corresponding to the sequence encoding the C-terminal 169 amino acids of HSP72. The HSP72 CC protein and its fragment, or antibodies specific to HSP72, are used in CC pharmaceutical compositions, pref. a vaccine, for treating or preventing CC infection by S. pneumoniae or related bacteria in humans, e.g. Cc. S. pyogenes or S. agalactiae.
